

QUICK-FIT INSTALLATION GUIDE

Roof Top Bag

Congratulations on your purchase of an MSA 4X4 quality Roof Top Bag!

**PRIOR TO USING YOUR ROOF TOP BAG, YOU MUST THOROUGHLY WET,
THEN DRY THE CANVAS SECTION OF THE BAG THREE (3) TIMES.**

Failure to do this may result in water penetrating the bag.

To care for your bag during its life, please do not subject the canvas portion of the bag to scrubbing, high pressure water, bleach or detergent.

This canvas portion of the bag should be cleaned with a microfibre cloth or large sponge and water only. Using anything else will result in the bag losing its waterproof nature.

When cleaning the top cover, please ensure that any detergent does not come into contact with the canvas part of the bag.

1. Familiarise yourself with your new MSA Roof Top Bag first. You will find one end of the bag cannot be opened. This is the front of the bag and goes to the front of your roof rack.
2. Undo and remove the top harness. It is not necessary to remove the top protective cover at this time. It is designed to protect the bag itself but can be removed later if you prefer.
3. Place your Bag on your roof rack. There are many different styles of Roof Racks. The basic principle is to feed the securing straps under your Roof Rack frame in a manner that when the bag is full and the top harness is in place and tensioned down that the straps pull your Bag down securely onto your Roof Rack.
4. Once fitted and your Bag is full, re-fit the top harness (and top cover if you removed it) and pull down securely. The excess straps can be folded up and held securely with their built in Velcro flaps that feed in under the main straps.
5. At the front lower corners of your Bag are some large Velcro straps. These are to be used to secure the front corners of your Roof Bag to your Roof Rack, to prevent lifting during highway driving.

Please note: When your Bag is empty and the sides lay flat, some rain may leak in under the Velcro Flap and through the zip. It is advisable to leave something in your Pack to keep the sides vertical, to prevent moisture from getting in.
